

My name is Gary Gross and I have been a Amateur Radio operator for 25 years. The Amateur Radio Service provides the nation with volunteer trained Emergency Communicators who provide a valuable service for Homeland Security. I am totally opposed to the use of Broadband Power Line on our nations power system. It has allready been proven that the use of BPL will create a interference level so severe that our HF frequencys will be unusable. Amateur Radio signals will also cause severe interference to BPL. The FCC has a duty to protect liscensed radio services, not destroy them. I strongly urge the FCC to reconsider the BPL issue and investigate other broadband tecknologies such as fiberoptics which wont destroy are HF spectrum and threaten homeland security.
